- 1 REPORTER: RICK SANBORN
- 2 MR. TRITICO: My name is Michael Tritico and
- 3 I'm here representing myself, some cousins, nephews -- my
- 4 nephew and niece and the environmental group, RESTORE, and
- 5 RESTORE stands for Restore Explicit Symmetry to our Ravaged
- 6 Earth. We formed that back in 1974 and we have filed other
- 7 things with FERC and DEQ, Corps of Engineers, everybody all
- 8 through the years.
- 9 The first concept that I'd like to address is
- 10 the concept of necessity. That was the one of the things
- 11 that the information online says is on the agenda for
- 12 scoping. And as far as necessity, this project, in my
- 13 opinion, is not necessary. And the main proof of that is
- 14 FERC itself. FERC has already given permits to Golden Pass,
- 15 Trunkline, Cheniere. All of whom certified to FERC and FERC
- 16 agreed with them that they had sufficient gas supply
- 17 contracts and systems set up.
- 18 I realize there's another contract involved with
- 19 Golden Pass and this company, but that time-wise came after
- 20 the Golden Pass certification that had already had a gas
- 21 supply. So, as far as being a necessity for Golden Pass, I
- 22 don't think so. And if necessity is required, then this
- 23 project is not necessary.
- 24 The next concept is cultural resources. There
- 25 is a very important regional tradition that has been ignored

- 1 by, not just FERC, but everybody -- DEQ, Corps of Engineers,
- 2 EPA -- and that is the concept of baptisms in surface
- 3 streams. For years, in fact, even still today sometimes the
- 4 churches -- the rural churches utilize the creeks for
- 5 immersion baptism. It's part of the culture; especially,
- 6 the Pentecostals. They sometimes, like at the Longville
- 7 Church, they did a brush arbor to emphasis to the new
- 8 generation what their ancestors had done to worship the
- 9 Creator.
- The immersion baptism is something that is part
- 11 of rigid doctrines. It's different from Catholics. I was
- 12 raised Catholic and the baptisms are sort of like -- they
- 13 call them "sprinkle." The Pentecostals call that sprinkling
- 14 and they say that's not biblical and that they must immerse
- 15 and so they need a creek, a clean creek. And what's been
- 16 happening in, for instance, Anacoco Creek, which had a lot
- 17 of baptism, got turned black by the paper mill runoff and
- 18 now Anacoco now irritates people's skin, so they can't use
- 19 it for baptisms.
- That's the kind of loss of tradition and
- 21 heritage that could be avoided in places that this pipeline
- 22 may cross, like Hoosier Creek, which is where my ancestors
- 23 had a big place and Hoosier Creek -- the old Cagle Estate
- 24 most of the people -- the Cagles, the Henningans, the
- 25 Neelys, all those people used that Hoosier Creek and Trout

- 1 Creek just to the north for baptisms.
- 2 Hoosier Creek is still a beautiful little creek,
- 3 clear water, beautiful surrounding bottom land, hardwood.
- 4 It's just a beautiful place. And to think that just a
- 5 stream in the watershed is going to be a major construction
- 6 project with mud running off is disturbing.
- 7 As far as cousins and everybody getting
- 8 baptized, there is a new generation coming, but most
- 9 everybody has already been baptized, so it's going to be the
- 10 kids of the new generations that don't get to follow their
- 11 ancestors' traditions if the creeks are all ruined. And
- 12 that's the kind of cultural resource that gets left out of
- 13 these documents and regulations, I guess, enforcement.
- 14 The environmental degradation is like
- 15 interference with migrations and loss of habitat. Those
- 16 things I see developing here in this project the way that
- 17 I've seen them develop in other FERC projects or the
- 18 projects that FERC regulates. What's interesting is that
- 19 some of the applicants take it seriously and do a good job
- 20 and some do not. Some are very slipshod and arrogant and
- 21 dismissive and other applicants take it seriously and do a
- 22 good job, even though the project itself might have its
- 23 problems, like the LNG projects. Where it's Venture Global
- 24 in Cameron or whether it's Driftwood in Carlyss, they both
- 25 have a big problem with if there's a fire people are going

- 1 to get burned at a distance from the plant.
- 2 But Venture Global, on the environmental side,
- 3 did a really job on its environmental impact statement,
- 4 whereas, Driftwood was very dismissive, so I see
- 5 differences. And in this one it hasn't progressed far
- 6 enough that I can tell whether or not this company is
- 7 seriously going to address environmental things or not, but
- 8 I guess that's why scoping meetings happen is so that we
- 9 say things like I hope that they take it more seriously like
- 10 Venture Global did rather than the way that Driftwood did.
- 11 There is a concept that has not been covered by
- 12 anybody in any of the Environmental Impact Statements and
- 13 it's something that I call silent noise. Animals can hear
- 14 things that humans cannot hear and some of them hear things
- 15 very well that we cannot hear. I would like for somebody to
- 16 check the silent noise at an existing pipeline that will be
- 17 at the same depth or near the same depth as this proposed
- 18 pipeline just to see whether or not there are frequencies
- 19 audible, below our hearing threshold and above our hearing
- 20 threshold, audible to animals.
- 21 And my dog, for instance, hears things that I
- 22 don't hear. I mean he hears them and it disturbs him at
- 23 times or he reacts or he goes after it, whatever it is, and
- 24 I'm sitting there wondering what is he after and what is he
- 25 reacting to and then maybe I will hear something. So, if

- 1 there are noises that we cannot hear, silent noises, those
- 2 need to be considered when determining whether or not a
- 3 pipeline is going to have adverse effects on the ecosystem.
- 4 If millions of cubic feet of gas are rushing
- 5 through a pipeline, likely, if it were on the surface even
- 6 humans might be able to hear it. I don't know. I've never
- 7 been next to a pipeline that was on the surface. I know I
- 8 don't hear the ones that are underground, but that doesn't
- 9 mean that animals don't hear it and that the animals might
- 10 have to move away, stay back, and any kind of disruption of
- 11 their zones can have cascading effects. If they get
- 12 displaced into some other individual's territory, both of
- 13 them suffer.
- 14 Now, I don't know that that's happening because
- 15 it's a silent noise, but it needs to be checked and maybe
- 16 this will be the first in the world to get checked, but
- 17 there always has to be a first, so I'm asking for silent
- 18 noise checking and find out what it does.
- 19 I mentioned in the thing here you know there are
- 20 questions like what frequencies dominant under what
- 21 conditions and I think it's an area that needs to be
- 22 researched. It should take a lot of time. It shouldn't
- 23 take a lot of expense. I would imagine there are decibel
- 24 meters that are used in industry and government that can
- 25 hear what we can't hear. I know that submarine science has

- 1 developed all sorts of things to track frequencies under
- 2 water, so surely there are some that can check this.
- 3 My cousins' parcels, which I was talking to the
- 4 Enable people in the other room, some are along Hoosier
- 5 Creek and page 72 of the PDF for that document which is a
- 6 No. 10 report. I'd better get the right name for it. It's
- 7 Draft Resource Report No. 10 on alternatives. Page 72 is
- 8 the map which does not have enough resolution for me to be
- 9 certain exactly where the pipeline crosses, but it is in the
- 10 Hoosier Creek Watershed very near the Old Cagle Family
- 11 Estate, which has been split up and so my cousins and I and
- 12 nephew and niece have parcels there and all of us would not
- 13 like to see Hoosier Creek muddied up or otherwise changed or
- 14 damaged, silted. I mean there are all sorts of things that
- 15 could happen if there's a construction nearby, even if it's
- 16 upstream.
- 17 A different parcel belongs to my cousin,
- 18 Jennifer Bauer, who lives near DeRidder on Bubba Loftin Road
- 19 and she has been contacted by the Enable Gulf Run Land
- 20 people. She has spent a while, several years, looking for
- 21 her dream place out in the country and she finally found it
- 22 and then came a land man and said they want to put a
- 23 pipeline right through her place and she's very upset
- 24 because that would damage her trees and her berry patches
- 25 and her other things that she's been looking forward to

- 1 working with. And she's in Texas this evening. She asked
- 2 me to speak for her, but she would not like a pipeline
- 3 damaging her place after this all this time of wanting to
- 4 find such a place.
- 5 There are other people that appear -- their
- 6 properties appear to be along either the main line route
- 7 headed down towards Starks or the branch that goes towards
- 8 Gillis. The maps are not of such resolution that I can tell
- 9 for sure which of these people that I know might be actually
- 10 in the same situation as Jennifer.
- 11 I wanted to look at the Appendix 1(E) Affected
- 12 Landowners to see if any of those were in the list and that
- 13 Appendix has a caption that says "Contains privileged
- 14 information. Do not release. Filed under separate cover"
- 15 and so I couldn't double check and see or I would've gone
- 16 and talked to some of them and said do you go along with
- 17 this, okay, or do you have any concerns I could speak -- a
- 18 lot of people just don't like to come speak at meetings.
- 19 They don't like to get involved is the phrase they use and
- 20 they do tell me thanks for going, thanks for saying
- 21 something.
- 22 So, it's not that I butt in. It's I don't do
- 23 something unless I'm invited, but some of them say, yeah,
- 24 would you please speak up about a certain thing, like, for
- 25 instance, the LNG plants. I've had people ask me to speak

- 1 up about them and I do.
- So, I could not find all the people that I
- 3 wanted to find to see if they would either come to the
- 4 meeting or tell me what to say or not to say. Some of them
- 5 might've said, oh, man, we love it. Don't mess me up.
- 6 Well, if that's what they wanted me to say, I'll say it, but
- 7 I don't know.
- 8 I did send an email to one set -- well, actually
- 9 two and told them about this, but I didn't get that email
- 10 sent until yesterday, so I don't know if they've even gotten
- 11 that yet.
- 12 Alright, those are my comments for this project.
- 13 And I've given you a written copy, which I'll fill out the
- 14 top sheet and that should cover everything for now, although
- 15 I wish the maps were better resolution.
- 16 MS. ELLIS: Good afternoon. Thank you for the
- 17 opportunity to address the Commission. My name is Teresa
- 18 Ellis Chance and my property is a part of the Beauregard
- 19 Parrish, property that the Enable Gulf Run Pipeline --
- 20 proposed pipeline -- alternative pipeline is actually --
- 21 they call it a "lateral." My property would be diagonally
- 22 crossed as a lateral pipeline.
- I have filed written comments with your --
- 24 they're found in your E-library. And this evening I would
- 25 just like to add at this public meeting a couple of other

- 1 statements.
- One, I did not include in my explanation to
- 3 FERC. In looking at your guidelines and regulations, you
- 4 speak to using easements of pipelines that already exist and
- 5 trying to parallel those pipelines. You also, though, speak
- 6 to roadways and railroad easements as other options. And in
- 7 my situation, on the west side of my property where my
- 8 property boundary parallels Jordan Deville Road, where I'm
- 9 requesting that the pipeline turn south that railroad
- 10 easement actually is adjacent to my property -- my west
- 11 most property line.
- 12 So, kind of following the FERC idea of running
- 13 along a person's edge of their property lines versus
- 14 diagonally cutting across my property, I would ask you to
- 15 consider that they move the property that they plan to use
- 16 for their pipeline that it is moved westward and run along
- 17 the side, the boundary of my west property line. I would
- 18 appreciate that consideration.
- 19 And the other consideration this evening that I
- 20 wanted to add or just reiterate is the footprint diagonally
- 21 I feel like is much larger. It is really inclusive of that
- 22 rectangle that the diagonal runs through. And so what
- 23 happens is you lose a much greater piece of property versus
- 24 just -- on paper it shows to be, say, 50-foot wide and in my
- 25 case it would be 637 1/2 feet, a diagonal cut across, which

- 1 comes out to about three-quarters of an acres in terms of
- 2 loss of property.
- 3 In our area every square foot is very valuable
- 4 and so I would appreciate your consideration of asking them
- 5 to move the pipeline to the west side of my property and for
- 6 it to run north/south once it makes their turn on the west
- 7 side of the road, which they already are coming west to
- 8 east. Instead of crossing the road, make a south turn and
- 9 run then along the easement for the right-of-way for the
- 10 railroad, which is abandoned.
- 11 There is a property owner on my south side. And
- 12 then once you get passed his property there are no other
- 13 residences for several acres and so it would be feasible, as
- 14 far as I'm concerned, very easy for them turn and run the
- 15 railroad easement. And then at some point further south
- 16 make their turn south and then pick up the old pipeline
- 17 easements which run through just nonresidential areas.
- I'm hesitant to put this on the record, but I
- 19 will. One of the gentlemen from Enable Gulf Run questioned
- 20 if they absolutely felt that they needed to run along the
- 21 existing abandoned pipeline area that crosses my property
- 22 would it benefit me more for them to be on the west,
- 23 southwest, or diagonal versus east, southeast diagonal. And
- 24 it would definitely be a positive if they would go ahead and
- 25 run easterly to where they would be land on the east most

- 1 side of the existing pipeline right-of-ways versus the west
- 2 side.
- I think that is the main thing. I do appreciate
- 4 the opportunity to speak to the Commission and I appreciate
- 5 you acknowledging the landowners and our concerns. The
- 6 documents that are in the E-library, the Ms. Yoho -- Lisa
- 7 Yoho out of Houston in one of her letters she acknowledges
- 8 that they have already, in working with landowners, made 40
- 9 adjustments to the initial route. And I told the young man
- 10 here this evening that I would like for them to make 41 and
- 11 move the pipeline to accommodate my request also, but I
- 12 understand.
- I was appreciative in her last correspondence,
- 14 which I read to be a monthly update, she actually
- 15 acknowledged that there was a landowner who had made a
- 16 request that the pipeline be turned south on the abandoned
- 17 railroad versus crossing her property diagonally and since
- 18 that was me I was really tickled to see that she had
- 19 acknowledged and that someone was paying attention to my
- 20 request. So, I thank you for your time. I hope I haven't
- 21 rambled too much, but I sincerely appreciate you considering
- 22 my request. Thank you.
- 23 (Whereupon, the meeting was concluded.)
